Introduction

PivotTables and the graphical representation of PivotTable data, known as PivotCharts, are both extremely powerful tools to analyze data in many different ways. For example, given a bunch of sales data, you could report on the following:

- Top salespeople by sales sold
- Top salespeople by dollars sold
- Top salespeople by region
- Sales of specific products by region
- Sales of specific products by salesperson
- Items sold where they sell
- And so on

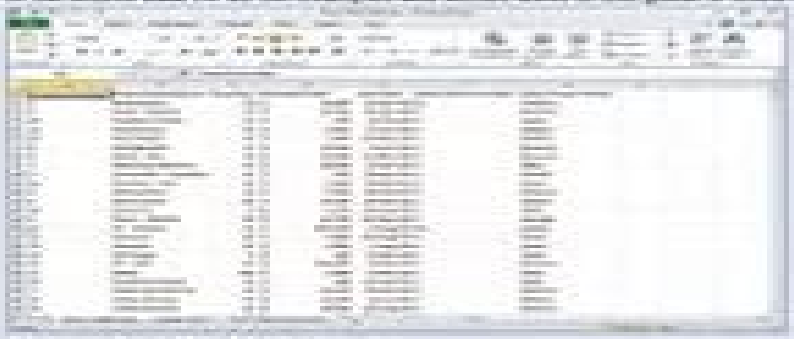
All of this can be done easily and in near real-time using PivotTables and PivotCharts. Data can even be stored in other locations, such as in an Access or SQL Server database. Once gathered and analyzed, this data can be shared with others in multiple ways throughout an organization.

This guide is a continuation of the PivotTable and PivotChart information in QuickStarts' Excel – Advanced QuickStudy guide. As such, material in it will not be duplicated here that guide has either will build on the material presented there. This guide will also only discuss Excel 2003, though much of the content and steps listed here apply to older versions as well.

NOTE: All the steps listed in this guide assume that your cursor is in the PivotTable where you start.

Common PivotTable Tasks

PivotTables provide a mechanism for taking lots of detailed data and summarizing it in two or more dimensions (rows, columns, and optionally, sheets). This feature is among the most powerful tools in Excel and makes data analysis fairly simple. A snapshot of some of the source data for all the examples and screen shots in this guide is listed here.



Layouts & When to Use Them

There are three layouts in Excel: Compact, Outline, and Tabular. Each of these formats displays the data a little differently but offers views of the exact same information. Many of the features of each view are the same, but the presentation is different. The following three sections have different options based on their respective sections and show the three layouts.

Compact

Compact was introduced in Excel 2007 and has been the default view since. In this view, if there are multiple levels of data, Excel will collapse them into a single column as seen in the screen shot here.

1. **Descriptions at Values:** This will describe the function (sum) and the field (Extended Price) used to calculate all the numbers displayed.
2. **+ and – :** Click the + sign to expand a category. Cells with may have subcategories that are also expandable) and the – sign to collapse it.
3. **Salesperson Data:** Data is grouped by description, then by year, then by the quarter the sale was made. All three of these levels are compressed into a single column (in this example, columns A).
4. **Grand Totals:** The total of all data are filtered to displayed in the last row and last column.
5. **Manual Filters:** The Manual Filters button allows you to display or hide some of the columns (in this example, store or Web salespeople). By default, every unique salesperson will be in a separate column. The arrow beside the caption Row Labels is also a manual filter for the rows and works in a similar fashion.
6. **Subtotals:** Data is subtotaled by description, then by year, then by the quarter the sale was made. Subtotals are displayed at the top of the data (EX) on the description or year line, and at the bottom of the data).
7. **PivotTable Field List:** Displays the fields in the table and allows fields to be added or removed by dragging and dropping them into the bottom of the pane or between the boxes at the bottom. The order of fields can also be modified within each box (Click then Ctrl+Left/Right) to view different data relationships.

Outline

Outline layout places each field for a separate row or column. Data can be expanded or collapsed as in the layout, but even if all the data in the column is collapsed, the column will still be there (Just Blank). Fields also that layout places a manual filter drop-down arrow beside each field that can be filtered. Subtotals are at the top of the data, as they are in Compact layout. In this screen shot, repeated data was displayed (Main Comms – Digital in Dublin in cells A6:A13) instead of blank cells being there as they were in the Compact layout).
