

Chapter 16: Development, Stem Cells, and Cancer

Concept 16.1 A program of differential gene expression leads to the different cell types in a multicellular organism

- What three processes lead to the transformation of a zygote into the organism?
 - cell division
 - cell differentiation
 - morphogenesis
- Explain what occurs in cell differentiation and morphogenesis.

cell differentiation - cells become specialized in structure and function
 morphogenesis - development of the form of an organism and its structure
- Differential gene expression results from different activators in different cells. How do different sets of activators come to be present in two cells? Explain how each of these occurs:
 - Distribution of cytoplasmic determinants - maternal substances in the egg that influence the course of early development
 - Induction - signals that cause changes in the target cell
- What is meant by determination? Explain what this means within an embryonic cell.

Unseen events that lead to the observable differentiation of a cell. once an embryonic cell has undergone determination, it is irreversibly committed to its final fate.
- What is apoptosis? How is it involved in the development and maintenance of organisms?

cells of mature organisms that are infected, damaged, or have reached the end of their functional life span, programmed cell death
- What process ensures that all the tissues and organs of an organism are in their characteristic places? Where do the molecular cues that control this process arise?

Pattern formation, this process arise from positional information
- What is controlled by homeotic genes?

Pattern formation in the late embryo, larva, and adult
- What are maternal effect genes? Describe some effects they may control.

gene, when mutant in the mother results in a mutant phenotype in the offspring. ex: in fruit flies, when the mother has a mutation, she makes a defective gene product, eggs are defective
- Bicoid* is a gene that produces a morphogen. What results when there is a high concentration of the *bicoid* protein in a developing embryo?

development of the head and thoraxes
