Applied Statistics I Rebecca M. Warner, 2020-01-14 *Applied Statistics I Basic Bivariate Techniques* has been created from the first half of Rebecca M Warner's popular *Applied Statistics From Bivariate Through Multivariate Techniques* The author's contemporary approach differs from some of the well worn texts in the market and reflects current thinking in the field It spends less time on statistical significance testing and moves in the direction of the new statistics by focusing more on confidence intervals and effect size Instructors of upper undergraduate or beginning graduate level courses will find that the greater focus on basic concepts such as partition of variance and effect size is more useful to students particularly as preparation for more advanced courses Spending less time on statistical significance testing allows for more time to be devoted to more interesting and useful statistics that students will see in journal articles such as correlation and regression This introductory statistics text includes examples in SPSS together with datasets on an accompanying website A companion study guide reproducing the exercises and examples in R will also be available

Applied Statistics II Rebecca M. Warner, 2020-01-14 Rebecca M Warner's bestselling *Applied Statistics From Bivariate Through Multivariate Techniques* has been split into two volumes for ease of use over a two course sequence *Applied Statistics II Multivariable and Multivariate Techniques* Third Edition is a core multivariate statistics text based on chapters from the second half of the original book The text begins with two new chapters an introduction to the new statistics and a chapter on handling outliers and missing values All chapters on statistical control and multivariable or multivariate analyses from the previous edition are retained with the moderation chapter heavily revised and new chapters have been added on structural equation modeling repeated measures and on additional statistical techniques Each chapter includes a complete example and begins by considering the types of research questions that chapter's technique can answer progresses to data screening and provides screen shots of SPSS menu selections and output and concludes with sample results sections By hand computation is used where possible to show how elements of the output are related to each other and to obtain confidence interval and effect size information when SPSS does not provide this Datasets are available on the accompanying website
