Returns & Volatility of Sectoral Indices of Nifty Dr. T. Peddanna, Generally, the fund managers prefer to include Nifty listed securities in their portfolio because they are the leading stocks of the nation. Using these companies, 11 sectors of stock indices were constructed. On the whole, the analysis of 12-year data starting from April 2002 to March 2014 established two phases of sectoral indices of Nifty: pre and post recession periods in the light of the sub-prime financial crisis that cropped up across the globe during 2008-09. As this study revealed, sector-wise return exposure under different economic conditions helps investors to diversify their funds to various sectors which give average return to their portfolios and at lower risk element. However, this study is helpful in understanding the risk-return relationship between different sectors of Nifty as well as ARCH and GARCH models to estimate the volatility in the near future in great detail. The direction of the Nifty index is mainly determined by a few sectors in the long run like Bank, Pharma, and Capital Goods indices. Finally, this study enables investors to understand the risk and returns of sectoral indices of Nifty to make effective portfolio decisions under different economic conditions to sustain the portfolio with the same objectives till its tenure. This book is useful for Portfolio Managers, Fund Managers, Investment Managers, and Policy makers, Academicians, Research scholars, Post-graduate students, and other commerce and Management students those working on Returns and volatility of stock market indices and securities.

GARCH 101 Robert F. Engle, 2008 ARCH and GARCH models have become important tools in the analysis of time series data, particularly in financial applications. These models are especially useful when the goal of the study is to analyze and forecast volatility. This paper gives the motivation behind the simplest GARCH model and illustrates its usefulness in examining portfolio risk. Extensions are briefly discussed.
