

GTU Probability and Statistics (P&S) Winter 2021 Paper Solutions

Q1

(a) Define a term random variable and explain different types of random variable

A random variable is not a traditional numerical variable, but rather a function that assigns a numerical value to each outcome in a sample space of a random experiment.

There are two main types of random variables:

- 1. Discrete Random Variables:** These are the random variables that can take on a countable number of distinct values. For example, the number of heads in 10 coin tosses is a discrete random variable because it can only take on integer values between 0 and 10.
- 2. Continuous Random Variables:** These are random variables that can take an infinite number of possible values. Continuous random variables are typically measurements and can include any value in an interval. For example, the height of students in a class is a continuous random variable because it can take on any value within a range (like between 4 feet and 7 feet).

(b) A card is drawn at random from a pack of 52 cards. What is the probability that the card is a spade or a king?

In a standard deck of 52 cards:
