

## ADVANCED DIFFERENTIATION

### Unit 4: A Nonliving System – Electric Circuits

**Introduction:** Advanced differentiation for this first grade science unit consists of one project which parallels the agenda of lessons. Teachers can pull a small group of advanced learners together to guide them through these engaging and challenging tasks to deepen and extend their understanding of core concepts and skills. After the mini-lessons, students may work on each of the project tasks at learning centers, as independent or partner work, or as homework. These projects are also ideal for use during the literacy block when focused on nonfiction reading and writing skills. Included are recommendations for creating small group instruction around these projects. How advanced learners can participate in core lessons described in the curriculum guide and engage in the projects to stay challenged as needed.

The following long-term learning targets are most deeply addressed in these small group sessions:

- 4.1 I can make a complete circuit using a battery, light bulb, and switch. (1.1.3.1.1)
- 4.2 I can explain that nonliving things are made of parts. (1.1.3.1.1)
- 4.3 I can explain that if a part of a circuit is missing or broken, it will not function properly. (1.1.3.1.1)
- 4.4 I can assemble materials using a picture as a guide. (1.1.3.1.1)
- 1.2 I can explain my thinking through drawings, writing and/or discussions. (1.1.3.1.1)
- 1.3 I can explain that many living and nonliving things are made of parts. (1.1.3.1.1)
- 1.5 I can explain that if a part of a system is missing or broken, it may not function properly. (1.1.3.1.1)

**When and where do I teach these small group sessions?**

Small group mini-lessons help your advanced first grade students jump into the tasks outlined for this project. How can teach these small group sessions once or twice a week as needed during science or literacy when your whole class is working independently or in small groups (e.g., independent work time, guided reading time, etc.)? Students should be able to continue pursuing the tasks in learning centers or at their seats throughout the days following your mini-lesson.

#### Parallel Projects

     	
<p><b>Can you SCAMPER a light bulb?</b></p>	<p>Students will take a deeper look at a complete circuit using a light bulb. The project begins with students generating big ideas about systems and proving how a complete circuit is a system. Students will explore and then write rules about light bulb systems. Finally students will use fluency, flexibility, originality and elaboration in their thinking through a process called SCAMPER to create a new complete circuit system using a light bulb.</p>

social health and physical sciences      Recent Developments in Theory and Applications of Fractional Order Systems  
Mehmet Yavuz, Dharmendra Kumar Singh, Stuart Townley, 2025-08-11 *Recent Developments in Theory and Applications of Fractional Order Systems* presents a rigorous and thorough analysis of various aspects of Fractional Calculus. The book provides readers with a thorough understanding of fundamental concepts and methods of applied mathematics utilized in a variety of scientific and engineering disciplines. The authors present each computational modeling concept with a definition, methods, theorems, and observations followed by typical application problems and step-by-step solutions. Each topic is covered in detail, followed typically by several meticulously worked-out examples and a problem set containing many additional related problems. In addition, the book discusses recent developments and the latest research on Fractional Calculus and its applications, demonstrating important applications in Engineering, Computer Science, Management, Social Science, and the Humanities. Provides readers with a thorough understanding of fundamental concepts and methods of applied mathematics utilized in a variety of scientific and engineering disciplines. Presents a systematic introduction to most of the important special functions in Fractional Calculus that commonly arise in scientific and engineering practice. Explores many salient computational modeling properties. Analyzes theoretical and practical problems in Fractional Calculus in fields such as Engineering, Computer Science, Management, Social Science, and the Humanities.      *Non-Integer Order Calculus and its Applications* Piotr Ostalczyk, Dominik Sankowski, Jacek Nowakowski, 2018-03-22 This book focuses on fractional calculus, presenting novel advances in both the theory and applications of non-integer order systems. At the end of the twentieth century, it was predicted that it would be the calculus of the twenty-first century, and that prophecy is confirmed year after year. Now this mathematical tool is successfully used in a variety of research areas like engineering, e.g., electrical, mechanical, chemical, dynamical systems, modeling, analysis, and synthesis, e.g., technical, biological, economical, as well as in multidisciplinary areas, e.g., biochemistry, electrochemistry. As well as the mathematical foundations, the book concentrates on the technical applications of continuous-time and discrete-time fractional calculus, investigating the identification, analysis, and control of electrical circuits and dynamical systems. It also presents the latest results. Although some scientific centers and scientists are skeptical and actively criticize the applicability of fractional calculus, it is worth breaking through the scientific and technological walls. Because the fractional community is growing rapidly, there is a pressing need for the exchange of scientific results. The book includes papers presented at the 9th International Conference on Non-integer Order Calculus and Its Applications and is divided into three parts: Mathematical foundations, Fractional systems, analysis and synthesis, System modeling. Seven papers discuss the mathematical foundations, twelve papers address fractional order analysis and synthesis, and three focus on dynamical system modeling by the fractional order differential and difference equations. It is a useful resource for the fractional calculus scientific community.      Circuits, Signals, and Speech and Image Processing Richard C.
