platform built on Chrome s JavaScript runtime for fast and scalable server side and networking applications Being an interface to the V8 JavaScript runtime it enables event driven programming to the web servers through super fast JavaScript interpreter that runs in the Chrome browser Non Blocking I O ModelNode js works on a non blocking I O model that makes it clean and usable ideal for the data intensive real time applications that have to perform in varied environments Beating the conventional pattern Node js has bought a revolution in the development circle and has become the sought after option for brands like Yahoo eBay Walmart etc The IoT phenomenon is also resorting to this platform for embedded devices and robotics like Cylon and Nodebots Node js empowers real time web application by adopting push technology as against web sockets to build server side web applications with two way channel i e client and server It operates on open web stack technologies like JavaScript CSS and HTML that work over the standard port 80 This tool is also lightweight both for in memory usage and data dense real time web applications that work on multiple devices Node js Blessing For DeveloperUndoubtedly Node js is truly a blessing for a developer and must be taken to use by every enterprise Take for instance chat applications which rule the market run on a lightweight a speedy and high traffic model and should adopt Node js to develop a data friendly real time application that works in various environments Experts might object that the two way channel has been present since long in the form of Java Applets or Flash but in reality they were redundant platforms using web transport protocol just to be circulated at the client side Further they were employed in non standard ports and worked in isolation with the help of additional permissions Node js has proved to be a great milestone in IT market and has become a sure shot savior for heavy load web applications Developers have got a swift move towards huge performance gains by giving the users advantage of end to end JavaScript experience and thus developing class apart real time web applications Still far from Node js If high performance and scalability as well as short web development cycles tempt you enough it is high time you adopt Node js Here are some reasons that will convince you further The Benefits1 The Fast SuiteCompanies are in awe of the speed at which Node js functions It runs on the V8 engine developed by Google that uses JavaScript into native machine code and operates at super speed Node js spares all the trouble involved with forming separate threads and instead uses a single thread that is the event loop that takes care of all the asynchronous I O operations Major actions in web applications including reading or writing to the database network connections or file system can be performed quickly with this suite Node js empowers the organizations to create quick robust network applications that can tackle parallel connections with increased throughput It does not slow the working by any chance but the developers need to be careful while writing the codes and the applications will get onto the right track     *English Mechanic and World of Science* ,1887
