## Practice Test

### Chapter 2: The Chemical Context of Life

1 What is generally true about essential elements and living organisms?

[\(📖 Concept 2.1\)](#)

SHOW HINT

Although all forms of life require iron, other elements are required only by certain species.

All organisms require 25 of the 92 naturally occurring elements to survive.

The elements carbon, hydrogen, nitrogen, and oxygen make up 20–25% of living mass.

Given their low concentrations in nature, the toxicity of some elements is generally not a factor in the evolution of biological communities.

Correct. Humans and other vertebrates require small amounts of iodine in their diets to maintain thyroid function. This is a requirement not observed among invertebrates.

2 If you were told that concentrations of trace elements above what is required by organisms generally have no effect on those organisms, what would you say?

[\(📖 Concept 2.1\)](#)

SHOW HINT

False. Increasing the concentration of trace elements above what is required generally has a beneficial effect on organisms.

The Significance Test Controversy Ramon E. Henkel, 2017-07-28 Tests of significance have been a key tool in the research kit of behavioral scientists for nearly fifty years but their widespread and uncritical use has recently led to a rising volume of controversy about their usefulness This book gathers the central papers in this continuing debate brings the issues into clear focus points out practical problems and philosophical pitfalls involved in using the tests and provides a benchmark from which further analysis can proceed The papers deal with some of the basic philosophy of science mathematical and statistical assumptions connected with significance tests and the problems of the interpretation of test results but the work is essentially non technical in its emphasis The collection succeeds in raising a variety of questions about the value of the tests taken together the questions present a strong case for vital reform in test use if not for their total abandonment in research The book is designed for practicing researchers those not extensively trained in mathematics and statistics that must nevertheless regularly decide if and how tests of significance are to be used and for those training for research While controversy has been centered in sociology and psychology and the book will be especially useful to researchers and students in those fields its importance is great across the spectrum of the scientific disciplines in which statistical procedures are

essential notably political science economics and the other social sciences education and many biological fields as well Denton E Morrison is professor Department of Sociology Michigan State University Ramon E Henkel is associate professor emeritus Department of Sociology University of Maryland He teaches as part of the graduate faculty [McGraw-Hill's MCAT, Second Edition](#) George J.
