Visual Reasoning in Science, Engineering, and the Humanities Daria Bylieva, Dong Luo, Alfred Nordmann, 2026-01-14 This book investigate visualization practices conceptually historically and strategically showing what visual thinking can achieve especially in professional training and educational contexts For a long time science and education were dominated by the word What mattered were written texts mathematical formulae and verbalizations And yet similes metaphors illustrations diagrams and geometric demonstrations were always involved Engineering and design thinking established the virtues of visual thinking A blue print or schematic representation can be investigated for dependencies and cause effect relations In recent decades a better understanding of visual thinking opened the door for tools and techniques especially in educational contexts

Analyzing and Modeling Interdisciplinary Product Development Frank Neumann, 2015-09-30 Frank Neumann focuses on establishing a theoretical basis that allows a description of the interplay between individual and collective processes in product development For this purpose he introduces the integrated descriptive model of knowledge creation as the first constituent of his research framework As a second part of the research framework an analysis and modeling method is proposed that captures the various knowledge conversion activities described by the integrated descriptive model of knowledge creation Subsequently this research framework is applied to the analysis of knowledge characteristics of mechatronic product development MPD Finally the results gained from the previous steps are used within a design support system that aims at federating the information and knowledge resources contained in the models published in the various development activities of MPD
