Prometheus Reimagined Albert C. Lin, 2013-10-30 A call for a more thoughtful and democratic approach to technology policy and regulation

The Coming Convergence Stanley Schmidt, 2009-09-25 Imagine direct communication links between the human brain and machines or tailored materials capable of adapting by themselves to changing environmental conditions or computer chips and environmental sensors embedded into everyday clothing or medical technologies that eliminate currently untreatable conditions such as blindness and paralysis Now imagine all of these developments occurring at the same time Far fetched Not So These are actually the reasonable predictions of scientists attempting to forecast a few decades into the future based on the rapid pace of innovation Author Stanley Schmidt a physicist a writer and the editor of *Analog Science Fiction and Fact* explores these and many more amazing yet probable scenarios in this fascinating guide to the near future He shows how past convergences have led to today s world then considers tomorrow s main currents in biotechnology cognitive science information technology and nanotechnology Looking even further downstream he foresees both exciting and potentially dangerous developments Longer healthier lives Cheap generally available food energy and technology Reduced pollution and environmental stress Economic disruption during transitional periods Excessive power in too few hands Increased vulnerability from overdependence on technology Schmidt notes that even a routine technology such as the CAT scan is the result of three wholly separate innovations started many decades ago which recently converged the X ray the computer and advances in medicine On a more ominous note he also observes that the 9 11 terrorist attack on the World Trade Center was made possible by the malicious convergence of two separate trends in modern engineering and technology the concentration of people in high rises within cities and the success of the passenger airline industry The message is clear the choices we make now will converge to create a near and distant future that will be almost unbelievably wonderful or unimaginably catastrophic or both This knowledgeable fascinating glimpse into the future is a must read for everyone interested in technology upcoming innovations in business science fiction and the future

Intracellular Delivery III Aleš Prokop,Volkmar Weissig,2016-10-31 A critical review is attempted to assess the status of nanomedicine entry onto the market The emergence of new potential therapeutic entities such as DNA and RNA fragments requires that these new drugs will need to be delivered in a cell and organelle specific manner Although efforts have been made over the last 50 years or so to develop such delivery technology no effective and above all clinically approved protocol for cell specific drug delivery in humans exists as yet Various particles macromolecules liposomes and most recently nanomaterials have been said to show promise but none of these promises have so far been reduced to human clinical practice The focus of this volume is on cancer indication since the majority of published research relates to this application within that we focus on solid tumors solid malignancies Our aim is critically to evaluate whether nanomaterials both non targeted and targeted to specific cells could be of therapeutic benefit in clinical practice The emphasis of this volume will be on pharmacokinetics PK and pharmacodynamics PD in animal and human studies Apart from the case of exquisitely specific antibody based drugs the development of target specific drug carrier delivery systems has not yet been broadly successful at the clinical level It can be argued that drugs generated using the conventional means of drug development i e relying on facile biodistribution and activity after preferably oral administration are not suitable for a target specific delivery and would not benefit from such delivery even when a seemingly perfect delivery system is available Therefore successful development of site selective drug delivery systems will need to include not only the development of suitable carriers but also the development of drug entities that meet the required PK PD profile **Comprehensive Biomaterials II** Kevin

Hermeneutics, History, and Technology Armin Grunwald, Alfred Nordmann, Martin Sand, 2023-06-01 For better and worse the future is often conceived in technological terms. Technology is supposed to meet the challenge of climate change or resource depletion. And when one asks about the world in 20 or 100 years, answers typically revolve around AI, genome editing or geoengineering. There is great demand to speculate about the future of work, the future of mobility, Industry 4.0 and Humanity 2.0. The humanities and social sciences, science studies and technology assessment respond to this demand but need to seek out a responsible way of taking the future into account. This collection of papers, interviews, debates grew out of disagreements about technological futures, speculative ethics, plausible scenarios, anticipatory governance and precautionary approaches. It proposes Hermeneutic Technology Assessment as a way of understanding ourselves through our ways of envisioning the future. At the same time a hermeneutic understanding of technological projects and prototypes allows for normative assessments of their promises. Is the future an object of design? This question can bring together and divide policy makers, STS scholars, social theorists and philosophers of history and it will interest also the scientists and engineers who labor under the demand to deliver that future. **Anticancer Research**, 1981 **Congressional Record** United States. Congress, 2003 The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873.
