levels being tested The last chapter deals with potential outlier or aberrant values and how to statistically determine if they should be removed from the sample data Each statistical test presented includes an example problem with the resultant software output and how to interpret the results Minimal time is spent on the mathematical calculations or theory For those interested in the associated equations supplemental figures are presented for each test with respective formulas In addition Appendix D presents the equations and proof for every output result for the various examples Examples and results from the appropriate statistical results are displayed using Minitab 18 In addition to the results the required steps to analyze data using Minitab are presented with the examples for those having access to this software Numerous other software packages are available including based data analysis with Excel [Prepare for the Pediatric Emergency Medicine Board Examination](#) Muhammad Waseem, Isabel A.
