Vogel,2018-08-16 Economists broadly define financial asset price bubbles as episodes in which prices rise with notable rapidity and depart from historically established asset valuation multiples and relationships Financial economists have for decades attempted to study and interpret bubbles through the prisms of rational expectations efficient markets and equilibrium arbitrage and capital asset pricing models but they have not made much if any progress toward a consistent and reliable theory that explains how and why bubbles and crashes evolve and can also be defined measured and compared This book develops a new and different approach that is based on the central notion that bubbles and crashes reflect urgent short side rationing which means that as such extreme conditions unfold considerations of quantities owned or not owned begin to displace considerations of price *American Book Publishing Record* ,1990 *The Publishers' Trade List Annual* ,1985

Edumetrics Nadir Altinok,Claude Diebolt,2026-01-01 This book introduces edumetrics a rigorous interdisciplinary framework for measuring learning outcomes over time and across space Based on Lord Kelvin s maxim that to measure is to know edumetrics redefines education as an empirical science that integrates economics psychology and social science to quantify cognitive and non cognitive competencies By harmonizing data from over 120 countries spanning half a century the book transforms fragmented indicators into coherent measures of learning quality and equity It critiques the limitations of traditional human capital theory and challenges the use of years of schooling as a proxy for skill Through econometric analysis historical inquiry and global datasets including Learning Adjusted Years of Schooling it reveals that educational structures not just resources shape productivity adaptability and social cohesion At its core the book addresses the paradox of why rising investments in schooling have not yielded proportional gains in learning With its integration of theory data and historical perspective it serves as both a methodological blueprint and a call to rethink how we define measure and value learning in the twenty first century **Advances in Financial Planning and Forecasting (New Series) Vol 6** Cheng F. Huyugüzel Kışla, 2021-03-07 This book evaluates the global labour market in the context of gender equality and the associated policies and regulations particularly in developing markets to recommend measures for encouraging gender equality It exposes the barriers that women employees encounter as well as some of the societal and workplace policies they specifically are subject to Important themes within this topic include participation rates the looming gap in hourly pay availability of part time and full time positions value and social status associated with jobs held by men and women The book examines how global gender policy objectives such as gender equality in careers gender balance in decision making and gender dimensions in research can be incorporated into policy frameworks The book analyzes the gendered nature of assumptions processes and theories The juxtaposition between family and work tradition and modernity and dependency and autonomy clearly still seems to be misunderstood Therefore the book asks whether work improves women s positions in society and or changes their roles in their families The authors explore and uncover the connections among employment entrepreneurship migration economies and gender global labour markets and provide helpful solutions to the perceptions surrounding women s status risks and inequality that limit their economic participation This insightful read provides comprehensive details on a variety of themes and encourages further research on policies that are key to promoting gender equality The book will appeal to postgraduate students and researchers of labour and feminist economics the economics of gender women s studies and sociology
