Process Costing and Inter - Process Profit Problem

A certain product passes through three processes before it is completed. The output of each process is charged to next process at a price calculated to give a profit of 20% on transfer price (Or 25% on cost price). The output of process III is charged to finished stock account on a similar basis. There was no work in process at the beginning of the year and overheads have ignored. Stock in each process have been valued at prime cost of process. The following data are obtained at the end of 31st march 2010.

	Process 1	Process 2	Process 3	Finished Stock
