The Flipped Classroom: Results from practice Jennifer L. Muzyka, Christopher S. Luker, 2016

The flipped classroom has become the new buzzword not only among educators but also in the general public with articles in USA Today Washington Post and The New York Times discussing this pedagogical approach Simply stated the flipped classroom is a high tech variation on a pedagogical method that has been around for generations The time honored Socratic method aims to actively engage students with instructors asking them questions leading them down a path where they are encouraged to see the connections between ideas Additionally flipped classrooms resemble the Thayer method which expects students to take responsibility for their own learning by studying material before it is covered in class Chemistry professors who teach in flipped classrooms embrace a variety of learning theories to guide their implementations Most chemists who use active learning approaches in their classrooms value some aspect of constructivism theory in which learners must begin their understanding of the concepts in their pre class assignments Later students apply the concepts in class using active learning methods For this book the authors define the flipped classroom as one where students gain exposure to course content before class and the face to face time involves active learning Experimenting with flipped classrooms like any new pedagogical technique can be overwhelming particularly if there is little external impetus to instigate reforms Significant course changes are undeniably hard and can require a substantial investment of time However studies increasingly show flipping to be worth the effort for students The chapters in Volume 2 of this collection provide further data about how flipping influenced their students learning
