Desarrollo de aplicaciones web distribuidas BERENGUEL GÓMEZ, JOSE LUIS, 2016-01-01 El software ha pasado en un breve espacio de tiempo de ser instalado y ejecutarse en un ordenador a convertirse en aplicaciones que se ejecutan en la nube sin que el usuario se preocupe por instalar o actualizar nada. Esto ha sido posible gracias a la enorme evolución de las tecnologías de desarrollo web. En este libro veremos cómo están creados los modelos más extendidos de arquitectura de software orientado a servicios y las aplicaciones web distribuidas así como las tecnologías y herramientas utilizadas para ello. Además también se introduce en el desarrollo y consumo de servicios web SOAP y REST utilizando la tecnología Java Enterprise Edition Java EE. Cada capítulo se complementa con actividades prácticas cuyas soluciones están disponibles en www.paraninfo.es. Los contenidos se corresponden con los de la UF1846 Desarrollo de aplicaciones web distribuidas inscrita en el MF0492_3 Programación web en el entorno servidor perteneciente al certificado de profesionalidad IFCD0210 Desarrollo de aplicaciones con tecnologías web regulado por el RD 1531/2011 de 31 de octubre y modificado por el RD 628/2013 de 2 de agosto.

guide to MariaDB and SQL Server is not only perfect for students and beginners but it also works for experienced developers who aren't getting the most from MariaDB and SQL Server. As you would expect, this book shows how to build from scratch two different databases, MariaDB and SQL Server, using Java. In designing a GUI and as an IDE, you will make use of the NetBeans tool. In chapter one, you will learn the basics of cryptography using Java. Here you will learn how to write a Java program to count Hash MAC Message Authentication Code, store keys in a KeyStore, generate PrivateKey and PublicKey, encrypt/decrypt data, and generate and verify digital prints. You will also learn how to create and store salt passwords and verify them. In chapter two, you will create a PostgreSQL database named Bank and its tables. In chapter three, you will create a Login table. In this case, you will see how to create a Java GUI using NetBeans to implement it. In addition to the Login table, in this chapter, you will also create a Client table. In the case of the Client table, you will learn how to generate and save public and private keys into a database. You will also learn how to encrypt/decrypt data and save the results into a database. In chapter four, you will create an Account table. This account table has the following ten fields: account_id (primary key), client_id (primary key), account_number, account_date, account_type, plain_balance, cipher_balance, decipher_balance, digital_signature, and signature_verification. In this case, you will learn how to implement generating and verifying digital prints and storing the results into a database. In chapter five, you create a table named Client_Data which has seven columns: client_data_id (primary key), account_id (primary key), birth_date, address, mother_name, telephone, and photo_path. In chapter six, you will be taught how to create a SQL Server database named Crime and its tables. In chapter seven, you will be taught how to extract image features utilizing BufferedImage class in Java GUI. In chapter eight, you will be taught to create a Java GUI to view, edit, insert, and delete Suspect table data. This table has eleven columns: suspect_id (primary key), suspect_name, birth_date, case_date, report_date, suspect_status, arrest_date, mother_name, address, telephone, and photo. In chapter nine, you will be taught to create a Java GUI to view, edit, insert, and delete Feature_Extraction table data. This table has eight columns: feature_id (primary key), suspect_id (foreign key), feature1, feature2, feature3, feature4, feature5, and feature6. In chapter ten, you will add two tables: Police_Station and Investigator. These two tables will later be joined to Suspect table through another table File_Case which will be built in the seventh chapter. The Police_Station has six columns: police_station_id (primary key), location, city, province, telephone, and photo. The Investigator has eight columns: investigator_id (primary key), investigator_name, rank, birth_date, gender, address, telephone, and photo. Here you will design a Java GUI to display, edit, fill, and delete data in both tables. In chapter eleven, you will add two tables: Victim and File_Case. The File_Case table will connect four other tables: Suspect, Police_Station, Investigator, and Victim. The Victim table has nine columns: victim_id (primary key), victim_name, crime_type, birth_date, crime_date, gender, address, telephone, and photo. The File_Case has seven columns: file_case_id (primary key), suspect_id (foreign key), police_station_id (foreign key), investigator_id (foreign key), victim_id (foreign key), status, and description. Here you will also design a Java GUI to display, edit, fill, and delete data in both tables. Finally, this book is hopefully useful and
