

11. What is mechanism?

Ans:

A mechanism is an assembly of different parts which perform a complete motion and is often part of a machine.

12. What is annealing?

Ans:

It is a process of heating a material above the re-crystallization temperature and cooling after a specific time interval. This increases the hardness and strength of the material.

13. What is ductile-brittle transition temperature?

Ans:

It is the temperature below which the tendency of a material to fracture increases rather than forming. Below this temperature the material loses its ductility. It is also called Nil Ductility Temperature.

14. Difference between tempering and annealing

Ans:

Annealing is a process in which work piece is heated up to certain temperature to get desired changes in grain or micro-structure and then allowed to cool slowly in order to relieve the stresses during work treatment. While tempering is a process wherein hardness and elasticity or ductility can be regained by use of heating and cooling cycle till desired properties can be obtained.
