The Evolution and Extinction of the Dinosaurs David E. Fastovsky, David B. Weishampel, 2005-02-07
This 2005 edition of *The Evolution and Extinction of the Dinosaurs* is a unique comprehensive treatment of this fascinating group of organisms. It is a detailed survey of dinosaur origins, their diversity, and their eventual extinction. The book can easily be used as a teaching textbook for a class, but it is also written as a series of readable, entertaining essays covering important and timely topics appealing to non-specialists and all dinosaur enthusiasts: birds as living dinosaurs, the new feathered dinosaurs from China, warm bloodedness. Along the way, the reader learns about dinosaur functional morphology, physiology, and systematics using cladistic methodology. In short, how professional paleontologists and dinosaur experts go about their work and why they find it so rewarding. The book is spectacularly illustrated by John Sibbick, a world famous illustrator of dinosaurs commissioned exclusively for this book.

Bringing Fossils to Life Donald R. Prothero, 2013-11-05
One of the leading textbooks in its field, *Bringing Fossils to Life* applies paleobiological principles to the fossil record while detailing the evolutionary history of major plant and animal phyla. It incorporates current research from biology, ecology, and population genetics, bridging the gap between purely theoretical paleobiological textbooks and those that describe only invertebrate paleobiology and that emphasize cataloguing live organisms instead of dead objects. For this third edition, Donald R. Prothero has revised the art and research throughout, expanding the coverage of invertebrates and adding a discussion of new methodologies and a chapter on the origin and early evolution of life.

New Zealand Journal of Zoology, 1989
