to the latest ISO and ASME standards An essential reference for engineers and students involved in design engineering and
product design Written by two ISO committee members and practising engineers *Engineering Drawing for Manufacture*
Brian Griffiths,2002-10-01 The processes of manufacture and assembly are based on the communication of engineering
information via drawing These drawings follow rules laid down in national and international standards The organisation
responsible for the international rules is the International Standards Organisation ISO There are hundreds of ISO standards
on engineering drawing because drawing is very complicated and accurate transfer of information must be guaranteed The
information contained in an engineering drawing is a legal specification which contractor and sub contractor agree to in a
binding contract The ISO standards are designed to be independent of any one language and thus much symbology is used to
overcome any reliance on any language Companies can only operate efficiently if they can guarantee the correct transmission
of engineering design information for manufacturing and assembly This book is a short introduction to the subject of
engineering drawing for manufacture It should be noted that standards are updated on a 5 year rolling programme and
therefore students of engineering drawing need to be aware of the latest standards This book is unique in that it introduces
the subject of engineering drawing in the context of standards **A Manual of Engineering Drawing for Students and**
