Objective/ Aim

This project aims at developing a highly cost-effective natural refrigerator which would cater to the needs of the people of the rural society. The refrigerator uses non-polluting natural resources and so is eco friendly. It can easily be customized as per requirements and available resources to suit the needs of different rural households. It is easy to construct and operate and can even be built by a farmer himself as per his needs. The idea has been successfully tested and a working prototype has been developed.

Technical details

The underlying principle is the phenomenon of *natural convection* that takes place due to density gradient. Density gradient describes the movement of air which results from the buoyancy forces imposed on air when it's density in the proximity of the heat transfer surface is decreased as a result of cooling process.
