The Case for a Carbon Tax Shi-Ling Hsu,2012-06-22 There is a simple straightforward way to cut carbon emissions and prevent the most disastrous effects of climate change and we're rejecting it because of irrational political fears That's the central argument of *The Case for a Carbon Tax* a clear-eyed sophisticated analysis of climate change policy Shi Ling Hsu examines the four major approaches to curbing CO2 cap and trade command and control regulation government subsidies of alternative energy and carbon taxes Weighing the economic social administrative and political merits of each he demonstrates why a tax is currently the most effective policy Hsu does not claim that a tax is the perfect or only solution but that unlike the alternatives it can be implemented immediately and paired effectively with other approaches In fact the only real barrier is psychological While politicians can present subsidies and cap and trade as win-win solutions the costs of a tax are immediately apparent Hsu deftly explores the social and political factors that prevent us from embracing this commonsense approach And he shows why we must get past our hang-ups if we are to avert a global crisis *Applications of Mathematics in Economics* Warren Page,2013 Shows instructors what mathematics is used at the undergraduate level in various parts of economics Separate sections provide students with opportunities to apply their mathematics in relevant economics contexts Brings together many different mathematics applications to such varied economics topics **The Property Species** Bart J. Wilson,2020 What is property and why does our species have it In *The Property Species* Bart J Wilson explores how humans acquire perceive and know the custom of property and why this might be relevant to understanding how property works in the twenty-first century Arguing that neither the sciences nor the humanities synthesize a full account of property the book offers a cross-disciplinary compromise that is sure to be controversial Property is a universal and uniquely human custom Integrating cognitive linguistics with philosophy of property and a fresh look at property disputes in the common law the book makes the case that symbolic thinking humans locate the meaning of property within a thing That is all human beings and only human beings have property in things and at its core property rests on custom not rights Such an alternative to conventional thinking contends that the origins of property lie not in food mates territory or land but in the very human act of creating with symbolic thought something new that did not previously exist Written by an economist who marvels at the natural history of humankind the book is essential reading for experts and any reader who has wondered why people claim things as Mine and what that means for our humanity Creative Universities Anke Schwittay,2021-10 In this wide-ranging book Anke Schwittay argues that in order to inspire and equip students to

generate better responses to global challenges we need a new high education pedagogy that develops their imagination creativity emotional sensibilities and practical capabilities *Principles of Economics* N.
