The new 4th edition of Seborg's *Process Dynamics Control* provides full topical coverage for process control courses in the chemical engineering curriculum, emphasizing how process control and its related fields of process modeling and optimization are essential to the development of high value products. A principal objective of this new edition is to describe modern techniques for control processes with an emphasis on complex systems necessary to the development, design and operation of modern processing plants. Control process instructors can cover the basic material while also having the flexibility to include advanced topics.

Energy Yaşar Demirel, 2012-01-26

Understanding the sustainable use of energy in various processes is an integral part of engineering and scientific studies which rely on a sound knowledge of energy systems. Whilst many institutions now offer degrees in energy related programs, a comprehensive textbook which introduces and explains sustainable energy systems and can be used across engineering and scientific fields has been lacking. *Energy: Production, Conversion, Storage, Conservation and Coupling* provides the reader with a practical understanding of these five main topic areas of energy, including 130 examples and over 600 practice problems. Each chapter contains a range of supporting figures, tables, thermodynamic diagrams and charts, while the Appendix supplies the reader with all the necessary data, including the steam tables. This new textbook presents a clear introduction of basic vocabulary, properties, forms, sources and balances of energy, before advancing to the main topic areas of Energy production and conversion in important physical, chemical and biological processes; Conservation of energy and its impact on sustainability; Various forms of energy storage and Energy coupling and bioenergetics in living systems. A solution manual for the practice problems of the textbook is offered for the instructor.

Energy: Production, Conversion, Storage, Conservation and Coupling is a comprehensive source, study guide and course supplement for both undergraduates and graduates across a range of engineering and scientific disciplines. Resources including the solution manual for this textbook are available for instructors on sending a request to Dr Yaşar Demirel at ydemirel@unl.edu.
