

Chapter 13

Hydrocarbons

Question 13.1:

How do you account for the formation of ethane during chlorination of methane?

Answer 13.1:

Chlorination of methane proceeds via a free radical chain mechanism. The whole reaction takes place in the given three steps.

Step 1: Initiation:

The reaction begins with the homolytic cleavage of Cl - Cl bond as:

Step 2: Propagation:

In the second step, chlorine free radicals attack methane molecules and break down the C-H bond to generate methyl radicals as:

These methyl radicals react with other chlorine free radicals to form methyl chloride along with the liberation of a chlorine free radical.

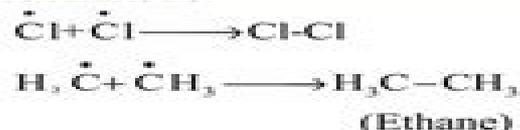

Hence, methyl free radicals and chlorine free radicals set up a chain reaction. While HCl and CH₃Cl are the major products formed, other higher halogenated compounds are also formed as:

Step 3: Termination:

Formation of ethane is a result of the termination of chain reactions taking place as a result of the consumption of reactants as:

Hence, by this process, ethane is obtained as a by-product of chlorination of methane.

Chemistry Works takes a fresh approach to teaching in physical chemistry. This modern textbook is designed to excite and engage undergraduate chemistry students and prepare them for how they will employ physical chemistry in real life. The student-friendly approach and practical contemporary examples facilitate an understanding of the physical chemical aspects of any system, allowing students of inorganic chemistry, organic chemistry, analytical chemistry, and biochemistry to be fluent in the essentials of physical chemistry in order to understand synthesis, intermolecular interactions, and materials properties. For students who are deeply interested in the subject of physical chemistry, the textbook facilitates further study by connecting them to the frontiers of research. Provides students with the physical and mathematical machinery to understand the physical chemical aspects of any system. Integrates regular examples drawn from the literature from contemporary issues and research to engage students with relevant and illustrative details. Important topics are introduced and returned to in later chapters; key concepts are reinforced and discussed in more depth as students acquire more tools. Chapters begin with a preview of important concepts and conclude with a summary of important equations. Each chapter includes worked examples and exercises, discussion questions, simple equation manipulation questions, and problem-solving exercises. Accompanied by supplementary online material, worked examples for students, and a solutions manual for instructors. Fifteen supporting videos from the author presenting such topics as Entropy, Rate Laws, Sequestration, Electrochemistry, etc. Written by an experienced instructor, researcher, and author in physical chemistry with a voice and perspective that is pedagogical and engaging.
