Graf,1977 Single Phase Grid Tie Inverter for Solar PV Panels with Active Power Decoupling Circuit Karthik Ramasubramanian,2012 Distributed energy resources like solar power PV Panels are usually connected to the AC grid through a single phase voltage source inverter VSI The major drawback associated with single phase grid tie inverters is the double frequency component of the grid that appears on the DC bus link Large electrolytic capacitors are generally employed in the inverters to eliminate the ripple component However their bulkiness and relatively short lifetime are motivational factors to replace them with small film capacitors This paper presents a synchronous boost buck based active power decoupling circuit in parallel with the dc bus link capacitor and discusses the different types of control strategies implemented Simulation results are presented for each control technique and it is shown that the ripple on the DC bus link is largely reduced due to inclusion of this circuit along with an expected extension of the lifetime due to the reduction in the amount of dc bus capacitance used
