Performance Measurement In Supply Chain Management:

Supply Chain Management Ralf Hieber, 2002 Supply chain management is emerging as one of the most powerful logistics management concepts for improving performance across the entire logistics network Companies that have already streamlined their internal business process are now working to realise further savings by improving the external business relationships within the more and more complex linked value adding business processes in logistics networks Although the benefits of SCM are well known in industry until now companies have only put this concept into practice in a limited way Therefore the newly developed integral model of collaborative performance measurement in this book will make a contribution towards easing and supporting improvements in supply chain management as well as giving specific guidelines for its implementation Furthermore the author provides newly developed key performance indicators that enable the measurement of the performance of co operation across the extended enterprise in a supply chain environment Based on case studies the integral model in close connection to the SCOR model was applied and has proven its applicability in industrial practice This book presents a rich variety of concepts and methods for industrial engineers business managers engineers and consultants as well as success stories in supply chain management Performance Measurement in Supply Chains Dr. Frank Gebhardt, 2009-05-29 Diplomarbeit aus dem Jahr 2009 im Fachbereich BWL Industriebetriebslehre Note 1,3 FernUniversität Hagen Lehrstuhl für Betriebswirtschaft insbes Produktions und Investitionstheorie Sprache Deutsch

Performance Measurement in Supply Chains Frank Gebhardt, 2009 Diplomarbeit aus dem Jahr 2009 im Fachbereich BWL - Industriebetriebslehre, Note 1,3 FernUniversität Hagen, Lehrstuhl für Betriebswirtschaft, insbesondere Produktions- und Investitionstheorie, Sprache Deutsch, Abstract.

Supply Chain Management und Performance Measurement sind Ergebnisse der beiden jüngsten großen Paradigmenwechsel der Betriebswirtschaftslehre Ende des 20. und Anfang des 21. Jahrhunderts. Mehr und mehr gelangte man zu der Erkenntnis, dass die Integration und das Management von Schlüsselprozessen aller Mitglieder einer Supply Chain hinweg den Erfolg der Einzelunternehmung ausmachen. Ein wesentliches Element der Unternehmensführung ist das Controlling, welches sich aufgrund der neuen Anforderungen des Supply Chain Managements stetig weiterentwickelt hat. Der zweite große Paradigmenwechsel wurde in den 1980er und 90er Jahren ausgelöst. Neue Begriffe wie Lean Production oder TPM wurden mit Inhalten und Konzepten versehen. Dieser Ansatz der Unternehmensführung brachte es mit sich, dass auch die bisher existierenden Controlling Konzepte zur Leistungsmessung und Beurteilung von Unternehmungen modifiziert werden mussten. Konzepte des Performance Managements und Performance Measurements nahmen ihren Einzug in die Wirtschaft. Bisher werden modernes Supply Chain Management und die modernen Arten des Controllings noch nicht umfassend in der Literatur zusammengefasst. Das Supply Chain Controlling schafft eine Informationsbasis für die Supply Chain Partner und definiert den Begriff der Leistung. Sprich Performance für die Kooperationspartner. In der aktuellen Forschung steht die Balanced Scorecard als klassisches Werkzeug des Performance Measurements auch für Supply Chains zur Verfügung. Die Betrachtung und Untersuchung anderer weniger bekannt gewordener Konzepte des Performance Measurements im Hinblick auf ihre Anwendbarkeit für Supply Chains bleibt dabei etwas zurück. Vorliegende Arbeit will den Rahmen abstecken, innerhalb dessen sich das Performance Measurement Supply Chain Management, 1999 Supply chain management is the management of all processes or functions to satisfy a customer's order from raw materials through conversion and manufacture through shipment. Performance measures or metrics are used to monitor the progress of supply chain initiatives. However, a consensus in DoD considers the metrics available to senior DoD managers to be inadequate or lacking the depth to measure the effectiveness of the DoD supply chain. The metrics are not balanced across customer service, cost, readiness, and sustainability performance objectives. Because of the lack of adequate measures, the Deputy Under Secretary of Defense Logistics tasked Logistics Management Institute (LMI) to propose a set of balanced performance measures that senior decision makers can use to monitor supply chain effectiveness. This report addresses the recommended top level or enterprise level performance measures. Enterprise metrics measure the overall performance of the supply chain and are cross functional.

Differenziertes Performance Measurement in Supply Chains Anke Giese, 2012-02-23 Wie lassen sich verschiedene Supply Chain Strategien abgrenzen

und welche Gestaltungsempfehlungen können bezogen auf die individuelle Supply Chain Strategie zugeschnittenen Performance Measurement gegeben werden. Anke Giese untersucht vor dem Hintergrund dieser Frage zunächst diverse Möglichkeiten zur Typologisierung von Supply Chain Strategien und stellt einen Ansatz zur Abgrenzung unterschiedlicher Supply Chain Typen vor. Auf Basis dieser Typologisierung wird ein differenziertes prozessorientiertes Konzept zur Einführung eines Performance Measurement entwickelt. Im Rahmen der Vorbereitungsphase werden dabei Fragen der Strategieableitung sowie der organisatorischen Verankerung eines Performance Measurement in den verschiedenen Supply Chain Typen diskutiert. Somit werden für alle im Rahmen der Einführung eines Performance Measurement Konzepts zu treffenden Entscheidungen Handlungsempfehlungen abgeleitet, die jeweils in Abhängigkeit von dem zugrunde liegenden Supply Chain Typ diskutiert werden.

Supply Chain Performance Measurement and E-Business Supply Chain Management Swen Beyer, 2010-07. Research Paper, undergraduate from the year 2010 in the subject Business economics, Supply Production Logistics, grade 1-2, European School of Business, Reutlingen. Business Administration, language English. Abstract: The environmental surroundings of most companies have changed radically in recent years. Especially the competitive pressure has risen substantially over the past decades, fuelled by an increased globalization of markets and supply chains. In order to continuously satisfy consumer needs in a timely manner, organizations have to focus on performance and efficiency improvement measures. In terms of supply chain management, performance includes the three dimensions: efficiency, effectiveness, and flexibility, which have to be dealt with on an equal basis. One means to improve supply chain performance is the linkage between various IT applications involved in the whole supply chain. These efforts and trends are treated under the term electronic supply chain management (E-SCM). There are three major critical success factors for the successful operation of an electronic supply chain. These can be clustered into decision motivation (e.g. a shared vision and a strong motivation), implementation process (e.g. the tight integration of inter-organizational information systems and the re-engineering of inter-organizational business processes and infrastructure conditions (e.g. agreement upon a shared industry standard)). There are numerous benefits of an E-SCM implementation, such as increased communication speed and decreased cost in terms of communication, inventory, and customer service. Furthermore, E-SCM allows mitigating the bullwhip effect by improving the availability of information throughout the entire supply chain. In addition, E-SCM allows organizations to implement an entirely pull-based approach. One downside of E-SCM is the need to make a company's entire business processes transparent also towards supply chain partners who might be engaged with the company.

Supply Chain Performance and Supply Chain Performance Management Timothy Nduru,2023-11-23 Seminar paper from the year 2023 in the subject Business economics Business Management Corporate Governance grade A Dedan Kimathi University of Technology course Supply Chain Management language English abstract A measurement and management system of supply chain performance is paramount for supply chain to achieve competitive differentiation This paper pays attention to the concept of supply chain and performance management and significance of measuring supply chain performance It also deals with supply chain performance and metrics characteristics of a good performance metric types and categories of supply chain performance metrics methods and approaches of measuring supply chain performance and finally information required when measuring supply chain performance Performance is the ability to meet certain criteria s the time it takes and the path used to get there Supply chain performance is defined as the ability of the supply chain to deliver the right product to the correct location at the appropriate time at the lowest cost of logistics This definition takes into account the time of delivery cost and value for the end consumer The authors believe that this definition includes the most important aspects of the supply chain

Sustainable Supply Chain Management Balkan Cetinkaya, Richard Cuthbertson, Graham Ewer, Thorsten Klaas-Wissing, Wojciech Piotrowicz, Christoph Tyssen,2011-01-27 This book focuses on the need to develop sustainable supply chains economically environmentally and socially This book is not about a wish list of impractical choices but the reality of decisions faced by all those involved in supply chain management today Our definition of sustainable supply chains is not restricted to so called green supply chains but recognises that in order to be truly sustainable supply chains must operate within a realistic financial structure as well as contribute value to our society Supply chains are not sustainable unless they are realistically funded and valued Thus a real definition of sustainable supply chain management must take account of all

relevant economic social and environmental issues This book contains examples from a wide range of real life case studies and synthesizes the learnings from these many different situations to provide the fundamental building blocks at the centre of successful logistics and supply chain management Perspective-driven Performance Measurement for Supply Chain Management Andreas Otto,Herbert Kotzab, **Designing a Performance Measurement Tool for Supply Chain Management** Claudia Altherr,Erik Hofmann,2006 *The SCOR model as an effective tool for measuring Supply Chain Performance* ,2018-07-09 Bachelor Thesis from the year 2015 in the subject Business economics Business Management Corporate Governance grade 2 5 University of Applied Sciences Fulda language English abstract The main objective of this paper is to analyse the Supply Chain Operation Reference SCOR model as an effective instrument for measuring Supply Chain Performance At the end a conclusion will be drawn based on the investigation carried out and a future perspective will be mentioned The 21st Century has been characterized by drastic advances in product development and shorter product life cycles The customer nowadays places a lot of emphasis on delivery times Thus rushing the right products to the end user has been the main objective of most companies More so in order to maintain strategic advantages companies have to improve their prices in order to maintain their market shares Supply Chain management is thus the strategic weapon needed by most global firms nowadays to stay on top of their game Given that raw materials and the manufacturing processes take place at different locations and even continents The coordination of information materials and financial flow is therefore imperative in order for the smooth and swift flow of data and products to be ensured Assessing and measuring the performance of processes along the entire supply chain is thus recommended So that every Supply Chain partner in the SC Network will benefit from the partnership Therefore the question arises Which instrument can be effectively used to measure the performance of a Supply Chain Companies have to measure their Supply Chain Performance in order to have a clear sense of direction By setting goals based on performance variables measuring them and following them up It is possible to create an improving business pattern that is in line with the company s strategic goals Companies have to measure and assess the processes involved along their entire supply chain By so doing they can improve their efficiency share best practices and improve their overall supply chain performance There are many instruments used for measuring supply chain performance Nevertheless using the most effective of them will guarantee better results **Supply Chain Performance Measurement** Lawrence Kabinga,2015-09-17 Supply chain management has evolved historically from the use of management accounting techniques to measure the performance of organization s supply chain performance to modest use of Key Performance Indicators to the current trend where supply chain managers use various mathematical models This book analyses in detail the traditional Supply Chain Management techniques versus the modern Supply Chain Management techniques and introduces a new measurement platform that uses life skills as a measurement index Life skills training is combined with emotional intelligence systems to be incorporated and used together with other available systems This new approach does

not replace the existing systems but complements them to enhance effectiveness and efficiency in the field of employee well being and welfare which inevitably affect their performance while performing supply chain management duties This new approach enhances mutual relationships between the supply chain department and other department in an organization setting to promote effective communication which is vital in the current world economy characterized by global procurement international sourcing and cross border trade

Development of a supply chain performance measurement system

Christian Biewald,2014-10-29 Master s Thesis from the year 2014 in the subject Business economics Supply Production Logistics grade 1 3 University of Applied Sciences Kempten language English abstract The goal of this master thesis is to provide an analysis of existing supply chain performance measurement systems as well as an evaluation of their suitability for the electronics manufacturing industry Furthermore the hypothesis that the implementation of a supply chain performance measurement system in cooperation with supply chain partners will lead to sustainable competitive advantages within the supply chain is going to be proven As competitiveness in future industry will be increasingly supply chain vs supply chain rather than firm vs firm holistic performance measurement systems become more and more relevant to global operating companies Hult 2008 p 538 Although the efficient management of global supply chain networks already has the potential to create competitive advantages most industrial companies still focus on production efficiency and selective optimization that disable fast adaption to changing customer requirements In increasingly saturated markets a technology driven competitive advantage is often quickly compensated by low cost countries In contrast high service quality established by efficient logistics processes can hardly be adopted in short time Richert 2006 p 44 Especially in the areas of fast moving consumer goods and the electronics industry companies need to be able to quickly react on changing consumer demands in order to fulfill the customer s requirements in a flexible way Cooperative management between supply chain partners creates higher transparency and market orientation that allows the entire supply chain network to operate in a more flexible and efficient way In consequence the supply chain s competitiveness will increase due to higher service value for the customer But as most industries still struggle with the development of flexible supply chain structures suitable management tools are obviously not available or applied yet Therefore this master thesis provides in a first step an evaluation of existing supply chain performance measurement systems regarding their suitability for current business environments In a second step the development process towards a practical implementation of the most suitable performance measurement system in an electronics manufacturing company is described Based on a defined supply chain strategy a standardized approach leads to the development of a supply chain management system providing the preconditions for creating a competitive advantage
