Words The **absolute value** of a number is the distance between the number and 0 on a number line. The absolute value of a number a is written as $|a|$.

Numbers

$$|-2| = 2 \quad |2| = 2$$

Positive numbers are greater than 0. They can be written with or without a positive sign (+).

+1 5 +20 10,000

Negative numbers are less than 0. They are written with a negative sign (-).

-1 -5 -20 -10,000

Two numbers that are the same distance from 0 on a number line, but on opposite sides of 0, are called **opposites**. The opposite of 0 is 0.

Words **Integers** are the set of whole numbers and their opposites.

Graph

A **coordinate plane** is formed by the intersection of a horizontal number line and a vertical number line. The number lines intersect at the **origin** and separate the coordinate plane into four regions called **quadrants**.

An **ordered pair** is used to locate a point in a coordinate plane.

ordered pair: $(4, -2)$

You can **locate** a point in the x -axis, in the y -axis, or in both axes.

The red points are mirror images of each other in the x -axis because the x -coordinates are the same and the y -coordinates are opposites. So, the red points are 3 units from the x -axis in opposite directions. The red points represent a **reflection in the x -axis**.

The blue points are mirror images of each other in the y -axis because the y -coordinates are the same and the x -coordinates are opposites. So, the blue points are 4 units from the y -axis in opposite directions. The blue points represent a **reflection in the y -axis**.

Key Idea

Reflecting a Point in the Coordinate Plane

- To **reflect a point in the x -axis**, use the same x -coordinate and take the opposite of the y -coordinate.
- To **reflect a point in the y -axis**, use the same y -coordinate and take the opposite of the x -coordinate.
