

## Chapter 5 Statistics and Probability

### Mean, Median, Mode, Range

There are three types of average: the mode, the median and the mean.

- The **mode** or the **modal** is the number that appears most frequently in a data set
- The **median** is the **middle number** of a sorted list of numbers
- The **mean** is the **average value** in a set of number
- (Mean = sum of values  $\div$  total number of values)
- The **range** is the difference between the largest and the smallest numbers.
- (Range = largest value – smallest value)

### Mean

The mean is the same as the average of a data set.

To find the mean, add up all the numbers in the data set and then divide by the total number of data values.

$$\text{Mean} = \text{sum of values} \div \text{total number of values}$$

**Example.** Bobbi buys groceries every two weeks. Her last four grocery bills were \$75.30, \$59.65, \$72.92, and \$67.20. What is the average amount of money Bobbi spends every two weeks on groceries?

**Exercise 1.** Ms. Reba keeps track of how many students drop in Monday through Thursday to study for their GED® test. Usually, students come in groups. Here is a chart of last week's numbers:

Ms. Reba forgot to write down two numbers for Wednesday. If the **average** number of students per group was **3.2**, and one of the unknown groups had **one more student than** the other unknown group, what is **the average number of students** who came to see Ms. Reba **each day**?
