

Structural Analysis, Compositional Grid

While Goya's *Sanmartín 21* appears to have a compositional arrangement that can be analyzed by the golden section technique, this discovery does not eliminate the possible presence of other organizational systems. In the golden section analysis, the strongest alignments are with the lower to central diagonals and these same diagonals will be present in a grid structure as well. The alignment with the

viewer's axis and the golden section structure diagram is close but not exact. The presence in the work of such a dominant vertical element as the axis and the dominant horizontal areas structure are clear, but there may be an alternate compositional structure. Below are diagrams that describe the process of working for a grid.

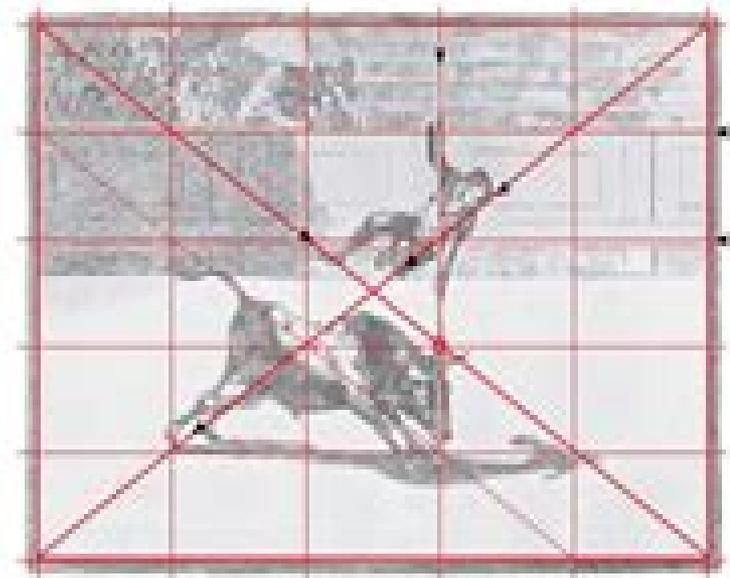

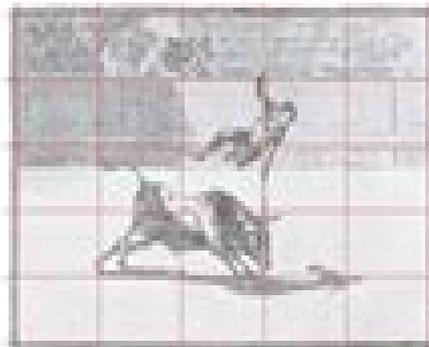

Grid Structure Beginning

When seeking a grid structure in a work of artistic design, look for dominant vertical and horizontal lines on a starting point. There is one very dominant vertical in the composition, the viewer's axis. The dominant horizontal lines are in the arena structure. These three lines become the starting point for a possible grid structure.

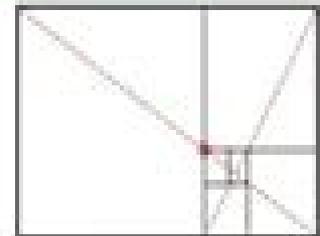

Grid Structure

By working from the potential lower grid lines, shown above, the remainder of the grid structure can be developed in this case a 5 column x 5 row grid structure for the work. The 5 x 5 structure creates asymmetry as the horizontal and axis align along the second column from the right. The bull is positioned in four visual fields and portions of the arena structure and arena occupy the top two rows.

Grid and Diagonal Analysis

The diagonals describe and reflect the center in the position of the torero and the bull. The vertical lines position the dominant axis. The horizontal lines describe the arena structure and arena. Each of the rectangles in the grid is a visual field, and because the diagonal lines pass the corners of each visual field, the visual fields are in the same proportion as the drawing.

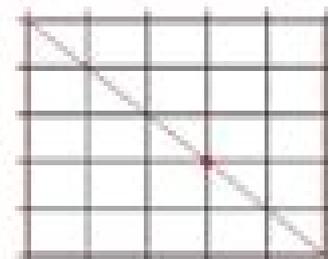

The Golden Section Point

Golden Section Point

The interior point where the square of the reciprocal point on another rectangle meets the next reciprocal rectangle is called the golden section point. This point was favored by Renaissance painters as the optimum location for a compositional element of interest. The point is approximately 61% in to the right of center and slightly below.

The idea of the golden section point can be applied to any rectangle. To find the golden section point in any rectangle divide the rectangle into a grid of five columns and five rows. The golden section point is two columns from the right and two rows from the bottom. No matter what the proportion of the rectangle the diagonal from upper left to lower right will touch the point. The golden section point is the Goya point, shown above with a red circle, is just above the torso of the bull.
