Dam Break Analysis Using Hec Ras:

Dam Break Analysis Using Hec-Ras- a Case Study Dilip Kumar,2011-06 The flood caused by dam failures always lead to a great amount of property damage and even loss of human and wild life While multi objective dam can provide a lot of benefit its failure or improper operation may lead to unexpected loss Hence the main aim of the paper is to develop mathematical models for simulating dam break hydraulics using the HEC RAS software to simulate the dam break flood in complex real river floodplain The simulated model has been used to predict and analyze the flood due to the failure of dam

One-dimensional (1D) & Two-dimensional (2D) Dam Break Analysis and Comparison of Different Breaching Parameters Using HEC-RAS Manahari Bhandari,2017 Dam failure mechanism produces the rapidly varied unsteady flow situation and the appropriate analysis to determine the flow condition is necessary Over the world more than 80 000 dams were constructed There have been more than 200 distinguished dam failures occurred within the twentieth century The history of dam construction exists together with the probability of dam failure causing casualties and catastrophic situations As climate change effect has caused the change in flow situations the safety concern in the dam is also necessary Casualties and damages due to dam break events depend upon the depth flow velocity population distribution as per geography and warning time related to the time to reach the peak flow to the downstream areas Prediction of actual breaching scenario is not certain and is related to the geographical and geological features of the site embankment type type of breach reservoir storage and flow conditions Estimating the accurate breaching scenarios and modeling of the dam break situation to characterize the hydrodynamic risk is necessary Among the numerous techniques of modeling dam break situation this study focused on the use of HEC RAS for analyzing the dam break situation Most of the simulation of a dam break situation used one dimensional analysis to solve flow conditions after the break of the dam The Latest development of HEC RAS 2D capabilities is also used in conjunction with 1D HEC RAS dam break analysis to compare and explore both analysis capabilities of HEC RAS The effect of HEC RAS simulation altering the breaching conditions is analyzed for the dam failure case of Big Bay dam located in Lamar County Mississippi The study area is chosen to obtain the simulation of piping dam failure which was the real cause of the dam failure event In addition the overtopping failure parameters established by the different breaching regression equations were analyzed Results obtained with both one dimensional and two dimensional analysis is compared along with the modeling procedure and concept of analysis From the analysis it is found that the time of peak water surface elevation and its magnitude is responsible in determining the extent of vulnerable areas to the dam break scenarios The present study showed the variation in peak flow condition between different breach parameters Breach bottom width found to be more sensitive parameters in dam failure events HEC RAS analysis is found to be suitable to predict the uncertain hydraulic behavior of dam break situation

Flood Forecasting and Hydraulic Structures P. V.

Timbadiya,Prem Lal Patel,Vijay P. Singh,Vivek L. Manekar,2023-08-31 This book comprises the proceedings of the 26th

International Conference on Hydraulics Water Resources and Coastal Engineering HYDRO 2021 focusing on broad spectrum of emerging opportunities and challenges in the field of flood forecasting and hydraulic structures It covers a range of topics including but not limited to early warning system urban flood modelling and management dam hazard classification river training and protection works structural and non structural measures for flood mitigation assessment and development of flood vulnerability hazard and risk maps rehabilitation of old dams streamflow turbines canal operation and related structure operation and management of dams including their instrumentation etc Presenting recent advances in the form of illustrations tables and text it offers readers insights for their own research In addition the book addresses fundamental concepts and studies in the field of flood forecasting and hydraulic structures making it a valuable resource for both beginners and researchers wanting to further their understanding of hydraulics water resources and coastal engineering

Water Resources Management and Reservoir Operation Ramakar Jha,Vijay P. Singh,Vivekanand Singh,L.B. Roy,Roshni Thendiyath,2021-09-20 This book explores many recent techniques including ANN fuzzy logic hydraulic models and IWRM utilized for integrated water resources management a real challenge in India for obtaining high irrigation efficiency The book deals with topics of current interest such as climate change floods drought and hydrological extremes The impact of climate change on water resources is drawing worldwide attention these days for water resources many countries are already stressed and climate change along with burgeoning population rising standard of living and increasing demand are adding to the stress Further river basins are becoming less resilient to climatic vagaries Fundamental to addressing these issues is hydrological modelling which is covered in this book Further integrated water resources management is vital to ensure water and food security Integral to the management is groundwater and solute transport The book encompasses tools that will be useful to mitigate the adverse consequences of natural disasters

Application of Geospatial Technology and Modelling on Natural Resources Management Sandipan Das,Prem C. Pandey,Onesimo Mutanga,Suvarna Tikle,Mengjiao Jiang,Uday Chatterjee,Akash Anand,2025-07-04 This contributed volume provides coverage of geospatial technology and modelling techniques that are useful for natural resource assessment at various scales from regional to global This makes it a valuable resource for researchers practitioners scientists faculties and students interested in understanding how geospatial tools can be used to assess natural resources The book provides numerous examples of how geospatial technology and modeling can be applied to different natural resource management scenarios including forest management wildlife conservation water resources management and climate change adaptation The book takes an interdisciplinary approach to natural resource management bringing together perspectives from ecology environment geography geology and other fields

Sustainable Development Perspectives in Earth Observation Mukunda Behera,Swadhin K Behera,Saroj Kanta Barik,Mrutyunjaya Mohapatra,Trilochan Mohapatra,2025-02-03 Earth Observation Sustainable Development Perspectives offers expert insight to the latest progress made in terrestrial oceanic and atmospheric processes and their inter linkage in

the face of changing climate using earth observation Reviewing contemporary research this volume will address various challenges faced in agricultural research and education crop production forecasting agroforestry floriculture horticulture crop insurance and marine resources utilization for sustainable development in the warming world The editors examine the advances made in understanding the changing dynamics of various ecosystems such as land use water resources ecosystem productivity and biodiversity The book addresses ocean atmosphere interactions modes of climate variations such as El Nino and Indian Ocean dipole extreme events tropical cyclone summer monsoon and distribution of organic matter and interlinks among various ocean atmosphere phenomena The use of advanced data sets measurements techniques modeling and analytics protocols analyses methods and interpretations are also discussed For those working towards sustainability using earth observation this text is a valuable resource for understanding the changing dynamics of the environment in the face of climate change Analyzes various challenges faced in agricultural research and education crop production forecasting agroforestry vegetation phenology forest cover resilience high altitude wetlands aerosols greenhouse gases and coastal management Explores ocean atmosphere interactions modes of climate variations such as El Nino and Indian Ocean Dipole extreme events tropical cyclone summer monsoon and distribution of organic matter and their interlinks among various ocean atmosphere phenomena Examines various biogeophysical processes using Earth observation for better climate mitigation and adaptation
