# Introduction to Data Mining Exam Questions and Answers

## Clustering - Answer-Descriptive

- \* Given a set of data points, each having a set of attributes, and a similarity measure among them, find clusters such that
- \* Data points in one cluster are more similar to one another.
- \* Data points in separate clusters are less similar to one another.

### Similarity Measures:

Euclidean Distance if attributes are continuous.

Other Problem-specific Measures.

## Association Rule Discovery - Answer-Descriptive

- \* Given a set of records each of which contain some number of items from a given collection;
- \* Produce dependency rules which will predict occurrence of an item based on occurrences of other items.

## Sequential Pattern Discovery - Answer-Descriptive

Given is a set of objects, with each object associated with its own timeline of events, find rules that predict strong sequential dependencies among different events.

Rules are formed by first discovering patterns. Event occurrences in the patterns are governed by timing constraints.

## Regression - Answer-Predictive

- \* Predict a value of a given continuous valued variable based on the values of other variables, assuming a linear or nonlinear model of dependency.
- \* Greatly studied in statistics, neural network fields.
- \* Examples:
  - Predicting sales amounts of new product based on advertising expenditure.
  - Predicting wind velocities as a function of temperature, humidity, air pressure, etc.
  - Time series prediction of stock market indices.

## Deviation Detection - Answer-Predictive

- \* Detect significant deviations from normal behavior
- \* Applications:
  - Credit Card Fraud Detection
  - Network Intrusion Detection

## Challenges of Data Mining - Answer-Scalability Dimensionality

**Data Mining** Charu C. Aggarwal, 2015-04-13. This textbook explores the different aspects of data mining from the fundamentals to the complex data types and their applications, capturing the wide diversity of problem domains for data mining issues. It goes beyond the traditional focus on data mining problems to introduce advanced data types such as text, time series, discrete sequences, spatial data, graph data, and social networks. Until now, no single book has addressed all these topics in a comprehensive and integrated way. The chapters of this book fall into one of three categories: Fundamental chapters, Domain chapters, and Application chapters. Data mining has four main problems which correspond to clustering, classification, association pattern mining, and outlier analysis. These chapters comprehensively discuss a wide variety of methods for these problems. Domain chapters discuss the specific methods used for different domains of data such as text, data, time series, data, sequence, data, graph, data, and spatial data. Application chapters study important applications such as stream mining, Web mining, ranking, recommendations, social networks, and privacy preservation. The domain chapters also have an applied flavor. Appropriate for both introductory and advanced data mining courses, Data Mining: The Textbook balances mathematical details and intuition. It contains the necessary mathematical details for professors and researchers but is presented in a simple and intuitive style to improve accessibility for students and industrial practitioners, including those with a limited mathematical background. Numerous illustrations, examples, and exercises are included with an emphasis on semantically interpretable examples. Praise for Data Mining: The Textbook: As I read through this book, I have already decided to use it in my classes. This is a book written by an outstanding researcher who has made fundamental contributions to data mining in a way that is both accessible and up to date. The book is complete with theory and practical use cases. It's a must-have for students and professors alike. Qiang Yang, Chair of Computer Science and Engineering at Hong Kong University of Science and Technology. This is the most amazing and comprehensive text book on data mining. It covers not only the fundamental problems such as clustering, classification, outliers, and frequent patterns, and different data types including text, time series, sequences, spatial
