DB2 11 for z/OS Technical Overview Paolo Bruni, Felipe Bortoletto, Ravikumar Kalyanasundaram, Sabine Kaschta, Glenn McGeoch, Cristian Molaro, IBM Redbooks, 2016-05-05 IBM DB2 Version 11.1 for z OS DB2 11 for z OS or just DB2 11 throughout this book is the fifteenth release of DB2 for IBM MVSTM. It brings performance and synergy with the IBM System z hardware and opportunities to drive business value in the following areas: DB2 11 can provide unmatched reliability, availability, and scalability; improved data sharing performance and efficiency; less downtime by removing growth limitations; simplified management, improved autonomies, and reduced planned outages. DB2 11 can save money and save time: aggressive CPU reduction goals, additional utilities performance, and CPU improvements. Save time and resources with new autonomic and application development capabilities. DB2 11 provides simpler, faster migration, SQL compatibility, divorce system migration from application migration, access path stability improvements, better application performance with SQL and XML enhancements. DB2 11 includes enhanced business analytics, faster, more efficient performance for query workloads, accelerator enhancements, more efficient inline database scoring, and enables predictive analytics. The DB2 11 environment is available either for new installations of DB2 or for migrations from DB2 10 for z OS subsystems only. This IBM Redbooks publication introduces the enhancements made available with DB2 11 for z OS. The contents help database administrators to understand the new functions and performance enhancements to plan for ways to use the key new capabilities and to justify the investment in installing or migrating to DB2 11.

DB2 10 for z/OS Performance Topics Paolo Bruni, Felipe Bortoletto, Ravikumar Kalyanasundaram, Glenn McGeoch, Roger Miller, Cristian Molaro, Yasuhiro Ohmori, Michael Parbs, IBM Redbooks, 2013-08-23 DB2 10 for z OS can reduce the total DB2 CPU demand from 5-20% compared to DB2 9 when you take advantage of all the enhancements. Many CPU reductions are built in directly to DB2, requiring no application changes. Some enhancements are implemented through normal DB2 activities through rebinding, restructuring database definitions, improving applications, and utility processing. The CPU demand reduction features have the potential to provide significant total cost of ownership savings based on the application mix and transaction types. Improvements in optimization reduce costs by processing SQL automatically with more efficient data access paths. Improvements through a range list index scan, access method list prefetch for IN list, more parallelism for select and index insert processing, better work file usage, better record identifier RID pool overflow management, improved sequential detection, faster log I/O access path certainty, evaluation for static SQL, and improved distributed data facility DDF transaction flow all provide more efficiency without changes to applications. These enhancements can reduce total CPU enterprise costs because of improved efficiency in the DB2 10 for z OS. DB2 10 includes numerous performance enhancements for Large Objects (LOBs) that save disk space for small LOBs and that provide dramatically better performance for LOB retrieval, inserts, load, and import/export using DB2 utilities. DB2 10 can also more effectively REORG partitions that contain LOBs. This IBM Redbooks publication provides an

overview of the performance impact of DB2 10 for z OS discussing the overall performance and possible impacts when moving from version to version We include performance measurements that were made in the laboratory and provide some estimates Keep in mind that your results are likely to vary as the conditions and work will differ In this book we assume that you are somewhat familiar with DB2 10 for z OS See DB2 10 for z OS Technical Overview SG24 7892 00 for an introduction to the new functions

DB2 10 for z/OS Technical Overview Paolo Bruni,Rafael Garcia,Sabine Kaschta,Josef Klitsch,Ravi Kumar,Andrei Lurie,Michael Parbs,Rajesh Ramachandran,IBM Redbooks,2014-07-16 IBM DB2 Version 10 1 for z OS DB2 10 for z OS or just DB2 10 throughout this book is the fourteenth release of DB2 for MVSTM It brings improved performance and synergy with the System z hardware and more opportunities to drive business value in the following areas Cost savings and compliance through optimized innovations DB2 10 delivers value in this area by achieving up to 10% CPU savings for traditional workloads and up to 20% CPU savings for nontraditional workloads depending on the environments Synergy with other IBM System z platform components reduces CPU use by taking advantage of the latest processor improvements and z OS enhancements Streamline security and regulatory compliance through the separation of roles between security and data administrators column level security access and added auditing capabilities Business insight innovations Productivity improvements are provided by new functions available for pureXML data warehousing and traditional online TP applications Enhanced support for key business partners that allow you to get more from your data in critical business disciplines like ERP Bitemporal support for applications that need to correlate the validity of data with time Business resiliency innovations Database on demand capabilities to ensure that information design can be changed dynamically often without database outages DB2 operations and utility improvements enhancing performance usability and availability by exploiting disk storage technology The DB2 10 environment is available either for brand new installations of DB2 or for migrations from DB2 9 for z OS or from DB2 UDB for z OS Version 8 subsystems This IBM Redbooks publication introduces the enhancements made available with DB2 10 for z OS The contents help you understand the new functions and performance enhancements start planning for exploiting the key new capabilities and justify the investment in installing or migrating or skip migrating to DB2 10
